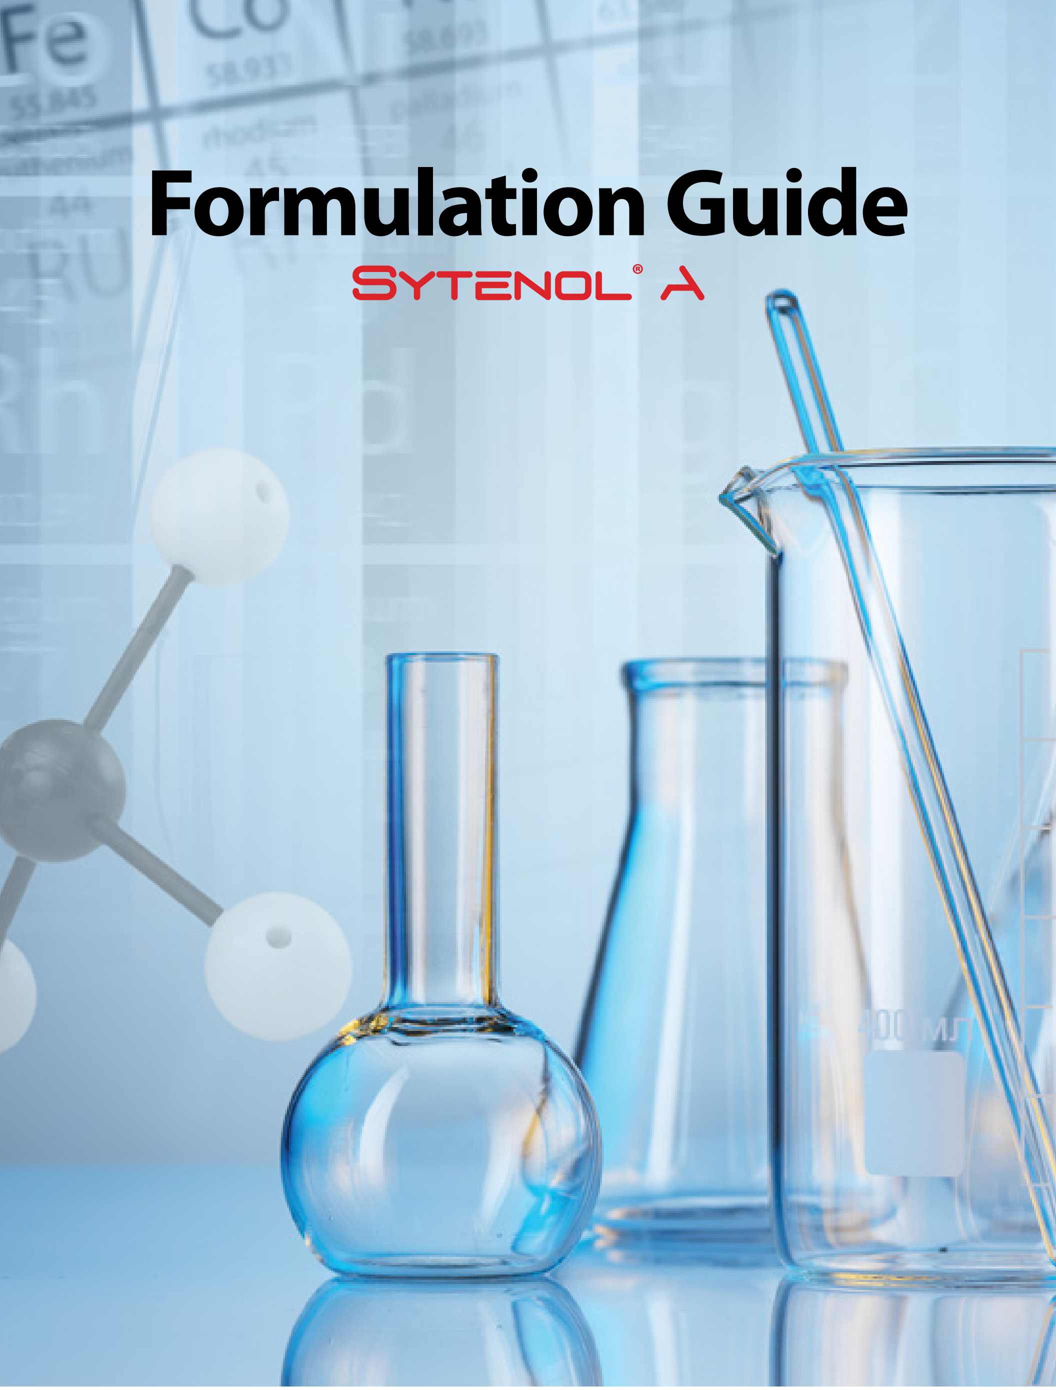
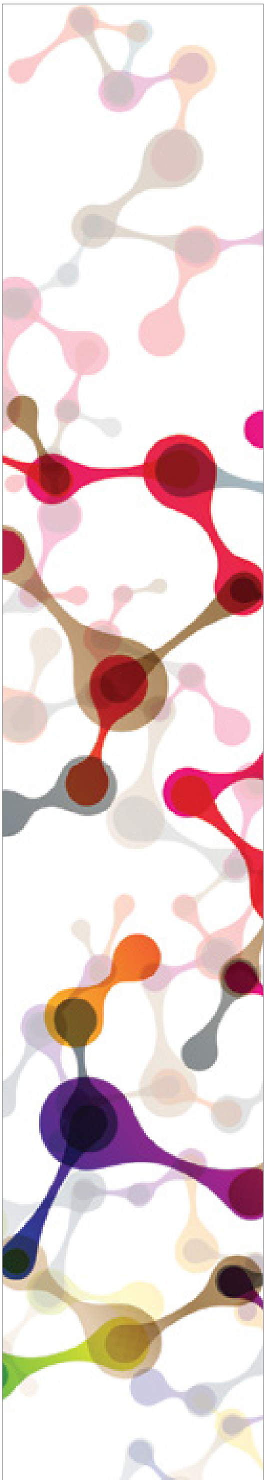
Formulation Guide

SYTENOL® A



SYTHEON

...making innovation work



Sytenol® A (INCI: Bakuchiol)

Sytenol® A is the first natural alternative to Retinol without having any of the negatives associated with Retinol; Photochemically & hydrolytically stable; Can be used during the day; Multiple comparative studies revealed Sytenol® A to be a true alternative to retinol. Modulates retinoid-binding & metabolizing genes; Significantly improves multiple dermal & dermo-epidermal junction genes/proteins; Collagen I, III & IV stimulator; Provides hydration by up-regulating synthesis of hyaluronic acid & aquaporin 3; Clinically proven to reduce multiple signs of aging - Significant reduction in roughness & dryness; fine lines & wrinkles and improvement in skin tone, elasticity & firmness; radiance and brightness. Sytenol® A is a natural and well-defined material with a purity level of ≥ 99%.

Formulation Guidelines

Formulated product containing Sytenol® A will be white and remain stable over time. Long term stability testing on emulsions containing 0.5-2.0% Sytenol® A showed practically no color shift at 45°C and RT.

- Sytenol® A should be used at a level of 0.5 – 1% (w/w) of finished formulation.
- Sytenol® A is miscible in a wide variety of emollients (for example, capric/caprylic triglycerides, C12-15 alkyl benzoates, dicaprylyl ether), vegetable oils (sunflower oil, jojoba oils, olive oil).
- Sytenol® A can be added directly to the oil phase. Avoid prolonged heating of the oil phase above 75°C.
- Sytenol® A is a phenolic compound. Therefore, presence of iron or copper ions must be avoided to eliminate coloration due to the interaction with these metal ions. Addition of a small amount of disodium EDTA (0.1%) or other chelating agents resolves this problem.
- The finished product must be acidic, preferably having pH below 6.5. A pH below 5.5 is recommended when potassium sorbate or sodium benzoate are used as preservatives.
- Avoid prolong exposure to sunlight or heat. Opaque and airless packaging is highly recommended for maintaining product integrity and stability over time.

Anti-Aging Night Cream with Sytenol® A and HydraSynol® DOI

Formulation#RC-01-13.01

INCI name	Trade Name/Supplier	% w/w
Phase A		
Water		64.60
