

TRI-SOLVE

High performance skin barrier recovery

Product category

Active ingredient

Chemical nature

Gel obtained by encapsulation by high pressure homogenization of Trehalose and Ceramides into lipophilic vesicles constituted by Lecithin and Cholesterol.

Indications

Indicated in products used for recovery of the skin barrier (detergents, creams, gels), for dry skins and/or with hyperkeratosis, guaranteeing a TEWL reduction.

INCI name

Trehalose, Ceramide NS, Cholesterol, Hydrogenated Lecithin

Chemical-physical characteristics

Appearance:	viscous gel
Colour:	from yellow to amber
Odour:	characteristic
pH (sol.10%):	4.50 – 7.50
Viscosity (at 25°C):	600-6.000 mPa.s
Dry residue (at 105°C):	77.00-87.00%

Composition

INCI Name	CAS N°	EINECS/ELINCS N°	%
Ceramide NS	-	-	1-5%
Trehalose	99-20-7	202-739-6	10-25%
Cholesterol	57-88-5	200-353-2	1-5%
Hydrogenated Lecithin	92128-87-5	295-786-7	1-5%
Glycerin	56-81-5	200-289-5	10-25%
Octyldodecanol	5333-42-6	226-242-9	5-10%
Aqua	7732-18-5	231-791-2	10-35%

Preservative system The product is unpreserved

Formulative indications This product may be used possibly added at the end of manufacturing process, after cooling phase in case of emulsions.

Suggested dosage From 1% to 3%

Stability Product is stable when stored in normal conditions.

Compatibility Generally compatible with all substances if used according to general indications. Any incompatibility could be due to single ingredients of the mixture.

Storage Keep product in a cool place away from direct light. Store in an air-tight container. In order to ensure an adequate stability of the product, store at temperature between 5-25°C. Before use it is suggested to keep it at room temperature.

Toxicological data Skin irritation (*in vitro*): minimum irritant.
Eye irritation (*in vitro*): mild irritant
