INGREDIENTS

ABYSSINE™

FROM THE DEEPEST OCEANS...
THE BEST SKIN PROTECTION

Biotech exopolysaccharide from
an extremophile living in deep sea
hydrothermal vents

-

Strengthens the natural skin defense
through a biomimetic mechanism

-

Protects and soothes sensitive
and sensitized skin from primary
external aggressions

UNIQUE EXOPOLYSACCHARIDE DERIVED FROM DEEP SEA, ABYSSINE™ PROTECTS AND SOOTHES EVEN THE MOST SENSITIVE AND REACTIVE SKIN BY ACTING ON THE GLOBAL SKIN DEFENSE SYSTEM.

Hydrothermal vents

Alteromonas Macleodii Abyssii

EPS produced by biotechnology

Although life seems impossible in the very harsh environment 3000 meters below sea level, exceptional fauna is found living in the deepest Abyssal Zone. Among it, a fascinating extremophile microorganism (*Alteromonas Macleodii Abyssii*) lives around hydrothermal vents and produces a powerful exopolysaccharide that protects its symbiotic worm host (*Alvinella Pompejana*) against the extreme high temperature, strong pressure, toxicity of smokes, etc.

From a collaboration between IFREMER (French marine research institute) and Lucas Meyer Cosmetics, this exopolysaccharide (EPS) has been isolated through biotechnology to extend biomimetic protective properties to Abyssine™ to prevent, soothe and repair sensitive and sensitized skin.

IMPROVEMENT OF SKIN SENSITIVITY THRESHOLD

All types of skin may become sensitive. Skin sensitivity is mainly caused by the barrier function alteration that improves the penetration of irritant triggers. Then the complex immuno-inflammatory cross talk “wakes up” causing a release of inflammatory mediators leading to cutaneous reactions.

1 Action on the immuno-inflammatory defense

In response to injury, the skin defense system produces several types of pro-inflammatory molecules. While most anti-inflammatory ingredients on the market targets cytokines, Abyssine™ decreases ICAM-1 expression (InterCellular Adhesion Molecule 1), a skin stress marker involved in the skin reactivity cascade.

Complementary action to usual cytokines target, the inhibition of ICAM-1 by 76% helps reduce skin reactivity.

Langerhans cells are the first player in inflammatory cascade, they are skin's sentinels of skin's defense system. Located in epidermis, they are activated by cytokine messengers and initiate the skin's immune response. Unfortunately, they can be damaged by several types of skin aggressors (heat, UV, oxidative stress...) leading a lower skin protection.

The total protection (100%) of Langerhans cells ensures an optimal skin defense.

2 Reinforcement of the skin barrier function

When the barrier function is altered, epidermis loses its auto-protection against aggressive substances, pathogen microorganisms and dehydration. This increases skin sensitivity.

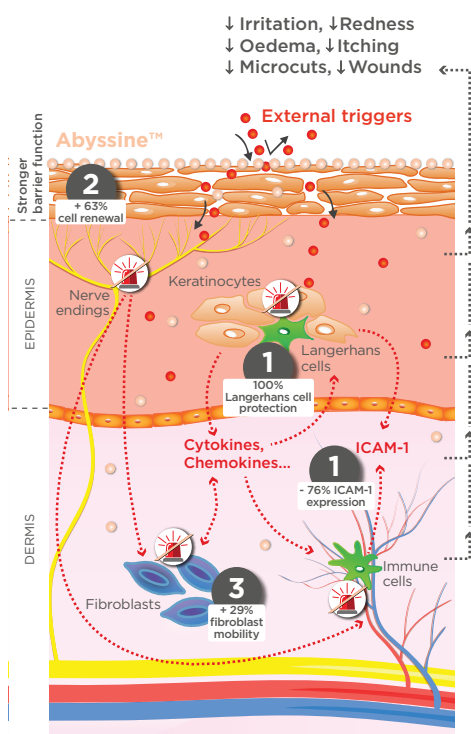

The increase by 63% in cell renewal improves skin resistance towards aggressions.

3 Improvement of skin restructuring

In case of severe irritations, skin can be strongly damaged and needs to be repaired. Fibroblast mobility is an important parameter for the tissue remodeling providing a better cellular migration that helps repair the injury.

The increase by 29% in fibroblast mobility enhances natural skin healing process.

Global solution to enhance skin sensitivity threshold

Sensitive skin + Abyssine™

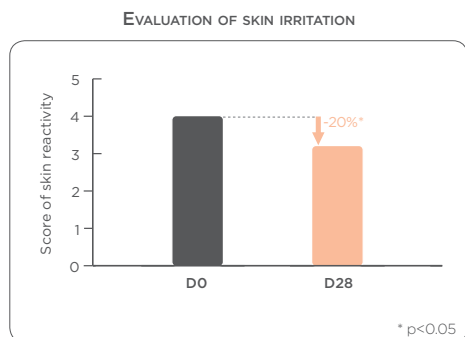

CLINICALLY PROVEN PROTECTIVE AND SOOTHING ACTIONS

Abyssine™ has been tested in several conditions attesting to its wide range of application. It can protect, soothe and heal skin harmed by chemical and mechanical aggressors, medication and sun.

Protection from chemical aggressions

Protocol

- 20 volunteers applied 0.5% Abyssine™ cream 2x/D for 28 days
- Skin sensitization induced by the application of a 10% lactic acid solution on the nasogenial groove
- Self-evaluation of the stinging sensation following a specific scale

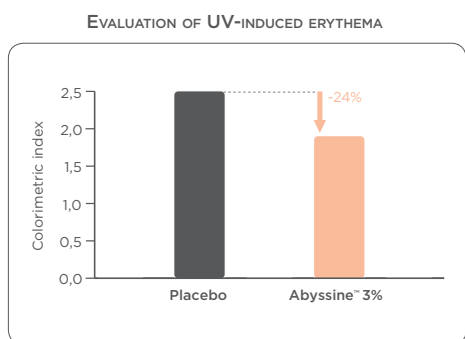

Decrease in cutaneous reactivity improves skin tolerance threshold.

Soothing effect from UV-induced erythema

Protocol

- 7 volunteers (Phototype I, II or III)
- UV irradiation (MED) on two skin zones on the back
- 5h later, application of 3% Abyssine™ gel on one zone and placebo on the other
- 2h later, chromametric evaluation of UV-induced erythema

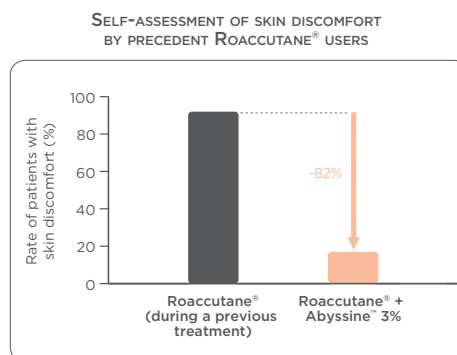

Skin redness induced by sun exposure is reduced.

Decrease in skin discomfort from medication

Protocol

- 12 volunteers starting Roaccutane® prescription (strong oral anti-acne treatment, well-known to generate skin discomfort)
- Application of 3% Abyssine™ cream 2x/D for 28-35 days
- Evaluation of skin discomfort

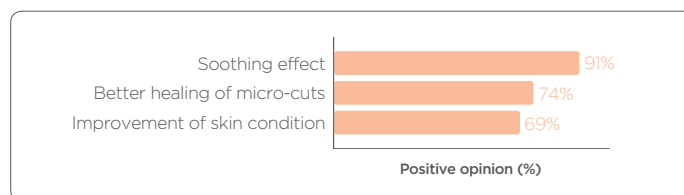

Reduction of skin discomfort provides optimal soothing benefits.

Fight against mechanical stress

Protocol (Consumer test)

- 77 men volunteers, shaving manually
- Daily application of 3% Abyssine™ balm after shaving for 2 weeks
- Self-evaluation by volunteers

Skin is soothed and healing of micro-cuts caused by shaving is improved.

BEST ALLY FOR SENSITIVE AND SENSITIZED SKIN, ABYSSINE™ IS HIGHLY EFFICIENT TO IMPROVE THE TOLERANCE THRESHOLD AND HELP REPAIR DAMAGED SKIN.

PRODUCT DESCRIPTION

INCI NAME

Abyssine™ PF: Water (1) (and)
Butylene Glycol (2) (and)
Alteromonas Ferment Extract (3)

CAS

7732-18-5 (1), 107-88-0 (2),
267233-41-0 (3)

EINECS

231-791-2 (1), 203-529-7 (2), - (3)

APPEARANCE

Translucid, colorless to beige, liquid to slightly viscous

FORMULATION

Abyssine™ should be incorporated at the end of the formulation at a temperature of 40°C.

DOSAGE

Preventive care: 0.5-1%
Intensive care: 1-3%

OPTIMUM pH

4.5-8.5

APPLICATIONS

- Daily skin care
- Sensitive and reactive skin care
- Sun and after sun skin care
- Repairing and restructuring skin care
- Soothing and calming care
- Day after day gentle protection
- Soothing slap care
- Shaving & after-shaving care
- Wound healing
- Acne prone care
- Baby care
- Atopic skin care
- Cosmeceutical / Dermocosmetic

FEATURES AND BENEFITS

FEATURES	BENEFITS
Unique exopolysaccharide from the Abysses of the ocean obtained by blue biotechnology	- Extraordinary story-telling - Sustainable process
Multi-target active ingredient on: - enhancement immuno-inflammatory defense (ICAM-1 & Langerhans cells) - strengthening the skin barrier function - improvement of natural skin restructuring	Provides a complete action to improve skin sensitivity threshold and soothe and repair irritated skin.
Outstanding clinical efficacy on the main types of external aggression (chemical, medication, environmental, mechanical)	- Low dosage (starting at 0.5%) - Protects, soothes and repairs - Suitable for all skin types & genders - Relevant for all types of products

S.O.S RESCUE CREAM 16.280.01 C183

INGREDIENTS	INCI NAMES	%
A Demineralized Water	Water	66.00
Dermofeel® PA-3	Sodium Phytate (and) Water (and) Alcohol	0.10
B Siligel™	Xanthan Gum (and) Lecithin (and) Sclerotium Gum (and) Pullulan	1.50
C Biophilic™ H	Hydrogenated Lecithin (and) C12-16 Alcohols (and) Palmitic Acid	4.00
D Sweet Almond Oil	Prunus Amygdalus Dulcis (Sweet Almond) Oil	4.00
Schercemol™ DISM Ester	Diisostearyl Malate	4.00
Lipex 106™	Shorea Stenoptera Seed Butter	6.00
Lanette® 22	Behenyl Alcohol	2.00
Schercemol™ DIA Ester	Diisopropyl Adipate	6.00
Dub Solid	Stearyl Heptanoate (and) Stearyl Caprylate	2.00
Vitapherole® E-1000	Tocopherol (and) Helianthus Annuus (Sunflower) Seed Oil	0.10
E Verstatil® PC	Phenoxyethanol (and) Caprylyl Glycol	1.10
F Exo-H™	Water (and) Butylene Glycol (and) Alteromonas Ferment Extract	1.00
Neutrazen™	Water (and) Butylene Glycol (and) Dextran (and) Palmitoyl Tripeptide-8	1.00
Abyssine™ PF	Water (and) Butylene Glycol (and) Alteromonas Ferment Extract	1.00
Orange Blossom	Fragrance	0.20
