

MYRAMAZE®-ESSENCE

Make your skin shine with all your senses

RAHN

The pleasure of eating can be a real sensory explosion

What a treat!

Delicious food helps us forget the stress of everyday life.

The more that food

appeals to all of our senses, the more positive the dining experience.

Cosmetics also affect all of the senses

If we activate the sensory receptors in the skin and nose, this leads to relaxation and revitalization on numerous levels.

The solution:

MYRAMAZE®-ESSENCE – activates the sensory receptors of the skin and nose, causing multisensory fireworks that quickly relieve stress in the skin.

MYRAMAZE®-ESSENCE

ensures positive vibes and a radiant appearance

MYRAMAZE®-ESSENCE

Radiant skin with all your senses

Activates sensory
receptors in the
nose and skin

Relaxes
fibroblasts
and skin

Provides positive
vibes and
immediately
relieves stress

Makes your skin
shine again

Can you taste it?

A scent can stimulate other senses

The world of smell and taste

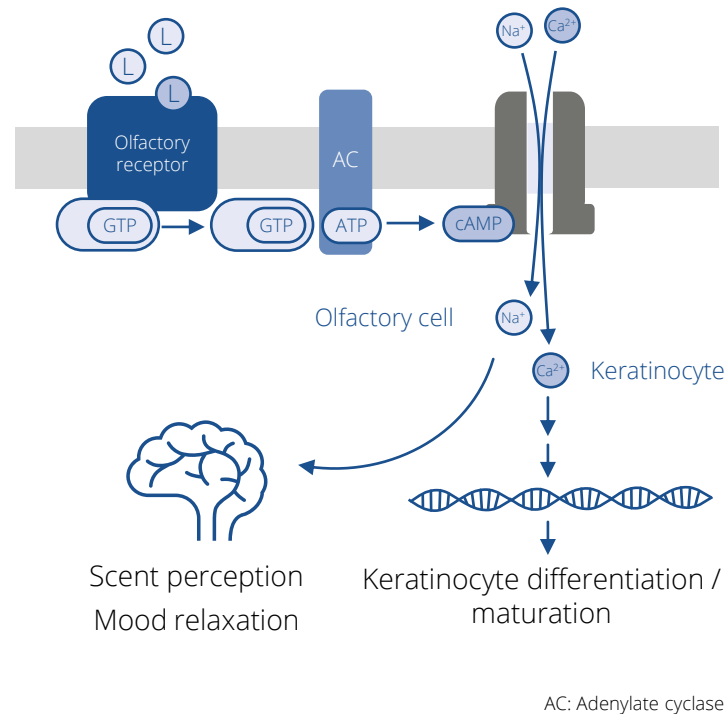

Different signal transductions lead to the same result

SMELL AND TASTE

- It is not only the nose that can smell or the tongue that can taste.
- Keratinocytes can perceive molecules via olfactory receptors and bitter taste receptors.
- A cAMP-dependent signal cascade leads to the maturation and differentiation of the cells (left).
- Bitter taste receptors on keratinocytes and fibroblasts transfer the signal independently of cAMP (right).

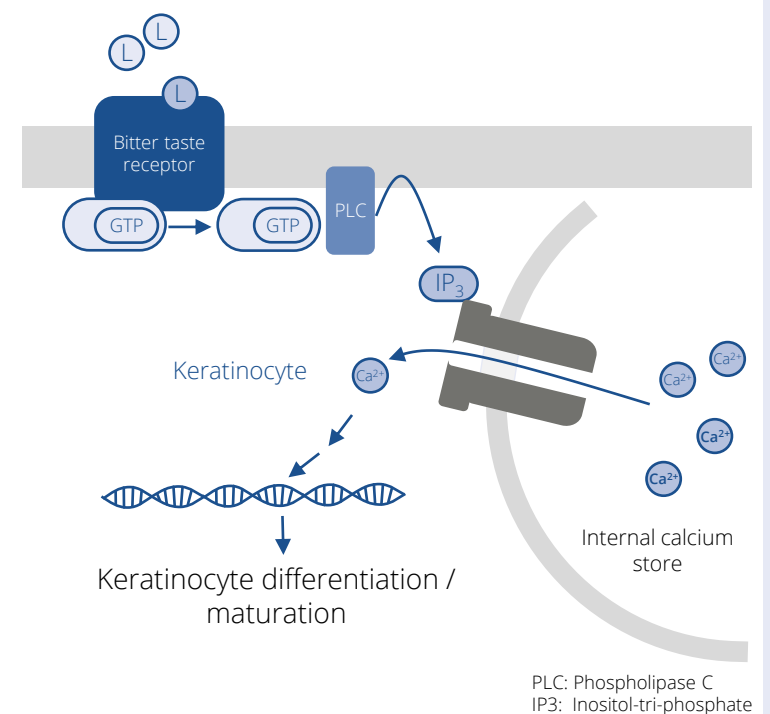

OLFACTORY RECEPTORS NOSE/SKIN

G-protein coupled receptor, cAMP-dependent

BITTER TASTE RECEPTORS OF THE SKIN

G-protein coupled receptor, **not** cAMP-dependent

Internal and external factors can disrupt our well-being and throw our skin out of balance

EVERYDAY TRIGGERS

Stress

Ageing

Lifestyle

Excessive exposure to the sun

Dry climate

Skin and mood
out of balance

Our skin can smell and taste

Our skin also has receptors for fragrances and bitter substances. They are the same as those on the tongue and in the nose. They are mainly located on the keratinocytes. Activation sets in motion vitalizing processes that promote keratinocyte differentiation and maturation. Aromatic essences have always been used to create a feeling of well-being from head to toe ... with all the senses. Ayurvedic oil therapy and similar treatments take advantage of this.

Internal and external factors can disrupt our well-being and throw our skin out of balance

EVERYDAY TRIGGERS

Stress

Ageing

Lifestyle

Excessive exposure to the sun

Dry climate

Skin and mood
out of balance

...WITH UNPLEASANT CONSEQUENCES

Decreased skin moisture

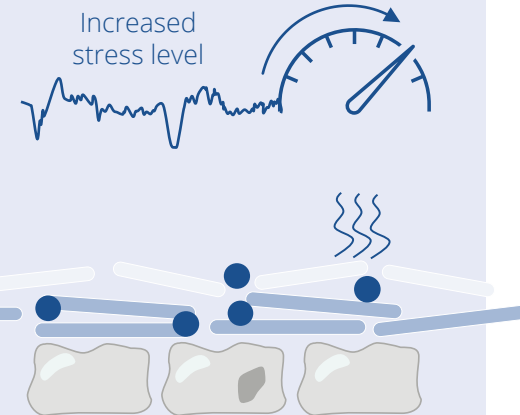

Increased TEWL

Sallow, dull skin

Increase in stress hormones

Negative mood

Reduced radiance

MYRAMAZE®-ESSENCE relaxes the skin

For inner beauty and a radiant appearance

CHARACTERISTICS OF STRESSED SKIN

Decreased skin moisture

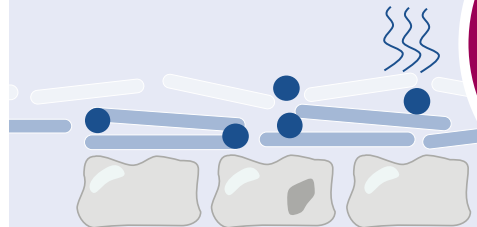

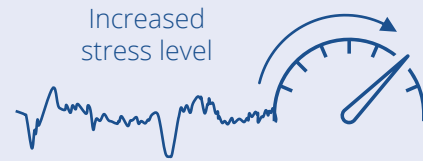

Increased TEWL

Sallow, dull skin

Increase in stress hormones

Negative mood

Reduced radiance

MYRAMAZE®-ESSENCE IN ACTION

Increased skin moisture

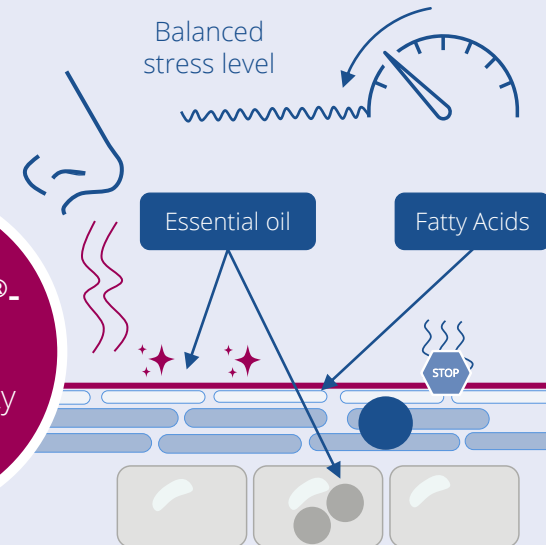

Reduced TEWL

Radiant, vital skin

Reduction of stress hormones

Positive mood

Positive radiance

MYRAMAZE®-ESSENCE

A multisensory firework for youthful skin

IN A NUTSHELL

Inspired by the scent of the "Balsam of Gilead", a valuable, fragrant healing and anointing oil in the ancient Orient.

Natural ingredients

With its fragrant, exotic aroma, it invigorates the mind and skin, even in amounts that are not consciously perceptible.

Optimum quality

of ingredients and production: MYRAMAZE®-ESSENCE is made by experts and conforms to the most stringent quality standards.

SWISS EXPERTISE 

HIGHLY VERSATILE

In the skin care sector

- Senso-cosmetics
- Anti-ageing cosmetics
- Decorative cosmetics
- Lip care

In the wellness sector

- Spa products
- Care baths

MYRAMAZE®-ESSENCE invigorates the mind and body, provides care for the skin and enables relaxation - with all the senses

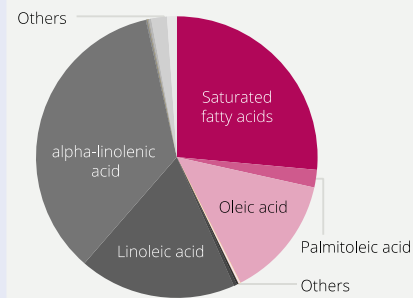

MYRAMAZE®-ESSENCE

The oily extract from the resurrection bush

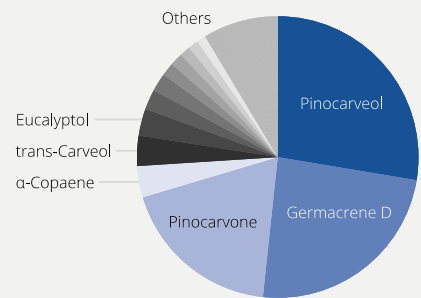

MYROTHAMNUS FLABELLIFOLIA EXTRACT

Fatty acid composition

Essential oil composition

A South African resurrection plant

- Endures extended dry periods, blooms immediately when it rains
- Includes essential oils in the leaves
- Pleasant fragrance profile – pine, herbs, citrus-fresh
- Supercritical CO₂ extract with essential oil (listed fragrance allergens below declaration limit)
- Activates olfactory and bitter taste receptors in the nose and skin

MYRAMAZE®-ESSENCE is the soul of the resurrection bush

MYRAMAZE®-ESSENCE – climate-neutral and sustainable

Produced without plant waste, since pomace is used twice

Nationwide
regional projects
Switzerland

Solar energy
Bokpoort
South Africa

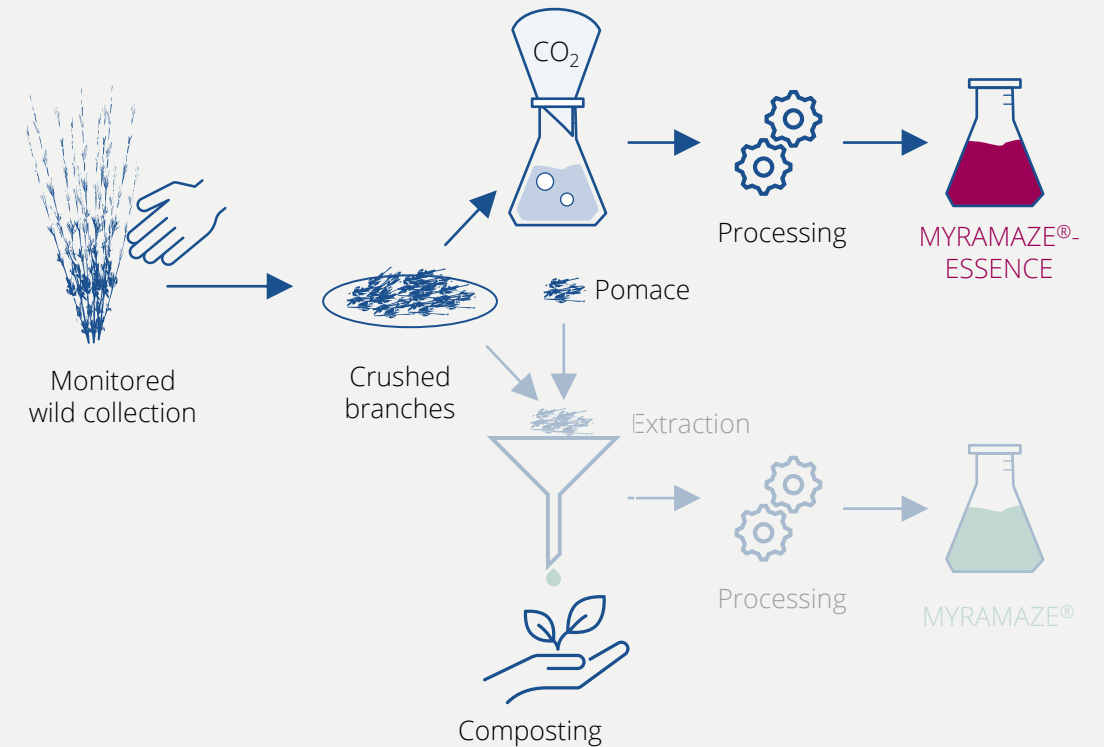

ClimatePartner.com/12934-2002-1001

The carbon footprint is calculated using the cradle-to-gate approach.
Unavoidable emissions are offset by the provision of support to two nature conservation projects.

Supports 10 of
the 17 UN
sustainability
goals

PRODUCTION CHAIN

in-vivo studies have demonstrated the effectiveness of MYRAMAZE®-ESSENCE

- Lightens the mood after stressful situations
- Reduces stress hormones after stressful situations
- Increases the proportion of alpha waves, which represent for a calm mood
- Five-fold effect for vital, radiant skin – 45% more radiance

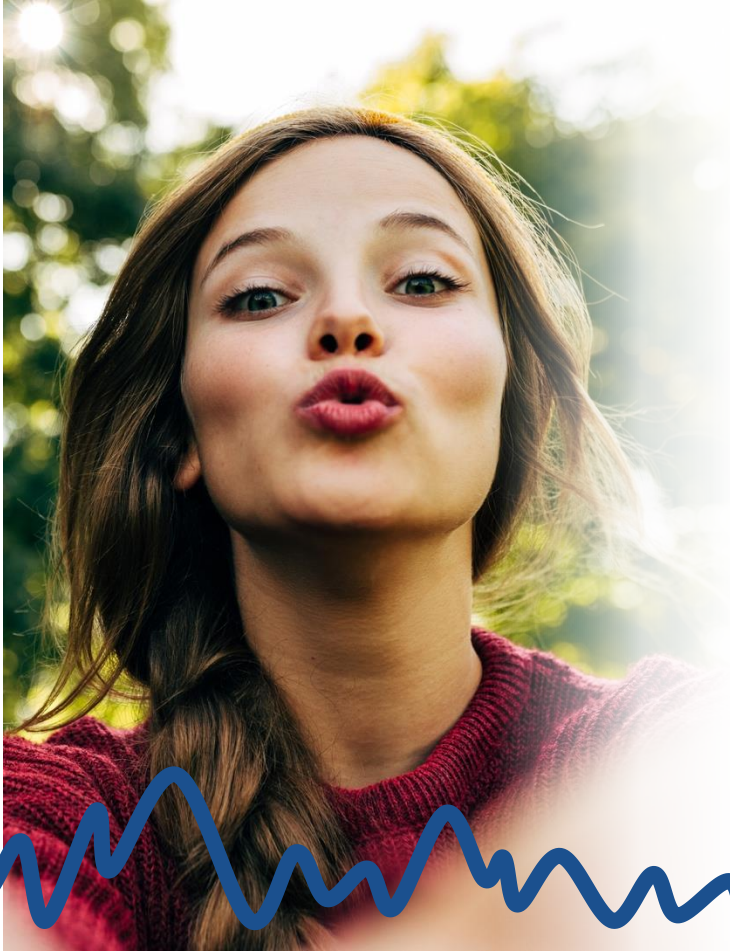

in-vitro studies confirm the effectiveness of MYRAMAZE®-ESSENCE

Relaxes fibroblasts and relieves the collagen matrix from tensile forces by 23%

Stimulates the influx of calcium into keratinocytes

Potential marketing claims and benefits of your products

With the natural power of the resurrection plant – awakens the skin and the mood

A multisensory fireworks display for youthful skin

Makes for a kissable mouth

Ensures positive vibes and a radiant appearance

The numerous, scientifically proven effects of MYRAMAZE®-ESSENCE at a glance

IN-VITRO STUDIES

- Brightens the mood after stressful situations
- Reduces stress hormones after stressful situations
- Increases the proportion of alpha waves, which represent for a calm mood
- five-fold effect for increased skin radiance
- Plumps up the lips
- Reduces wrinkles
- Increases the elasticity of the skin

IN-VIVO STUDIES

- Relaxes fibroblasts and relieves the collagen matrix of tensile forces
- Stimulates the influx of calcium into keratinocytes

OTHER STUDIES

- Has a fresh, pleasant smell with notes of wood and herbs

Stress induction test with 3 % MYRAMAZE®-ESSENCE and placebo, covered with vanilla scent (*in-vivo* study)

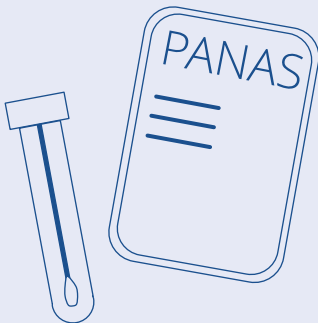

STRESS INDUCTION BLOCK

Stress induction
with a negative
OASIS image set

2.5 minutes

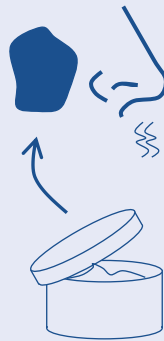

Saliva sample and
mood survey

5 minutes

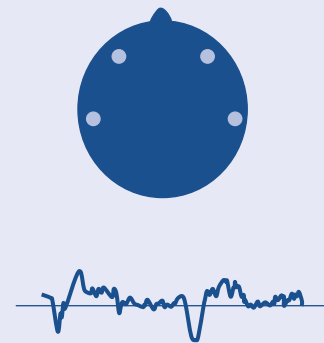

PRODUCT / ODOUR TESTING BLOCK

Product application
scent stimulus

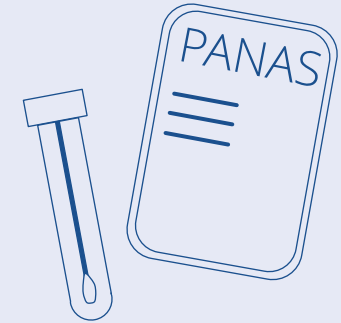

1 minute

EEG recording

5 minutes

Saliva sample and mood
survey

5 minutes

MYRAMAZE®-ESSENCE creates a positive mood

after application to the face (*in-vivo* study)

METHODOLOGY

Inquiry about mood using the "Positive and negative affect schedule" (PANAS).

PROCEDURE

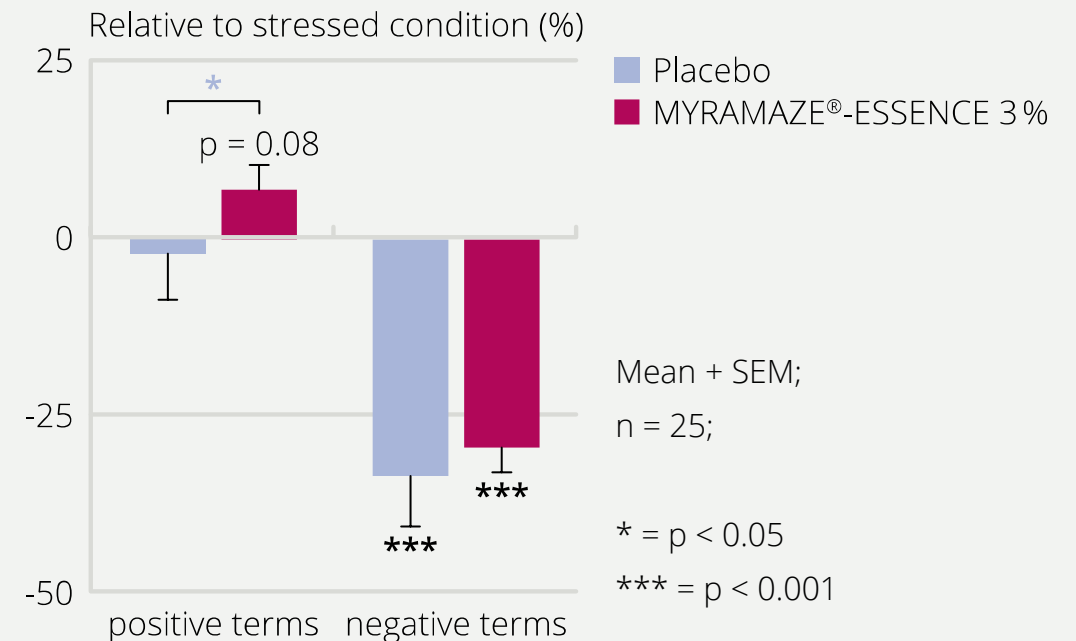

Presentation of negatively associated images from the OASIS image database for 2.5 minutes. After 5 minutes, inquiry about mood. Then application of the cosmetic formulation to the face and survey again after 5 minutes.

RESULTS

More positive mood by 7.4%, significantly above placebo. The use of both cosmetic formulations had a significant effect on reducing negative mood parameters.

Relieves stress right after use

Change in PANAS mood score after 10 minutes

MYRAMAZE®-ESSENCE reduces stress hormones

after a stressful situation (*in-vivo* study)

METHODOLOGY

Measurement of cortisol and α -amylase in saliva using ELISA.

PROCEDURE

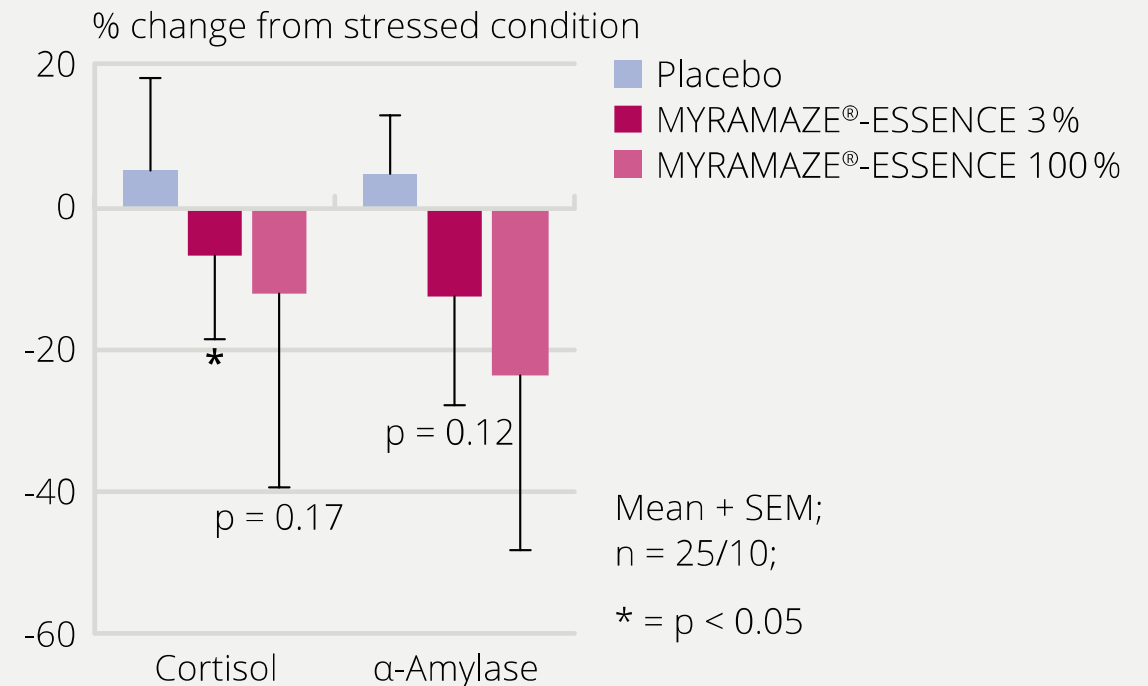

Presentation of negatively associated images from the OASIS image database for 2.5 minutes. A saliva sample is taken after 5 minutes. Then application of the cosmetic formulation to the face or smell the active ingredient and further sampling after 5 minutes. Analysis of the concentration of stress hormones.

RESULTS

Significant reduction of the stress hormone cortisol and limit-significant reduction of α -amylase. No reduction with placebo. The pure active ingredient led to a greater reduction in stress hormones.

Relieves stress right after use

Change in hormonal stress response after 10 minutes

MYRAMAZE®-ESSENCE reduces stress symptoms

after a stressful situation (*in-vivo* study)

METHODOLOGY

Measurement of brain waves using EEG recordings (MUSE 2).

PROCEDURE

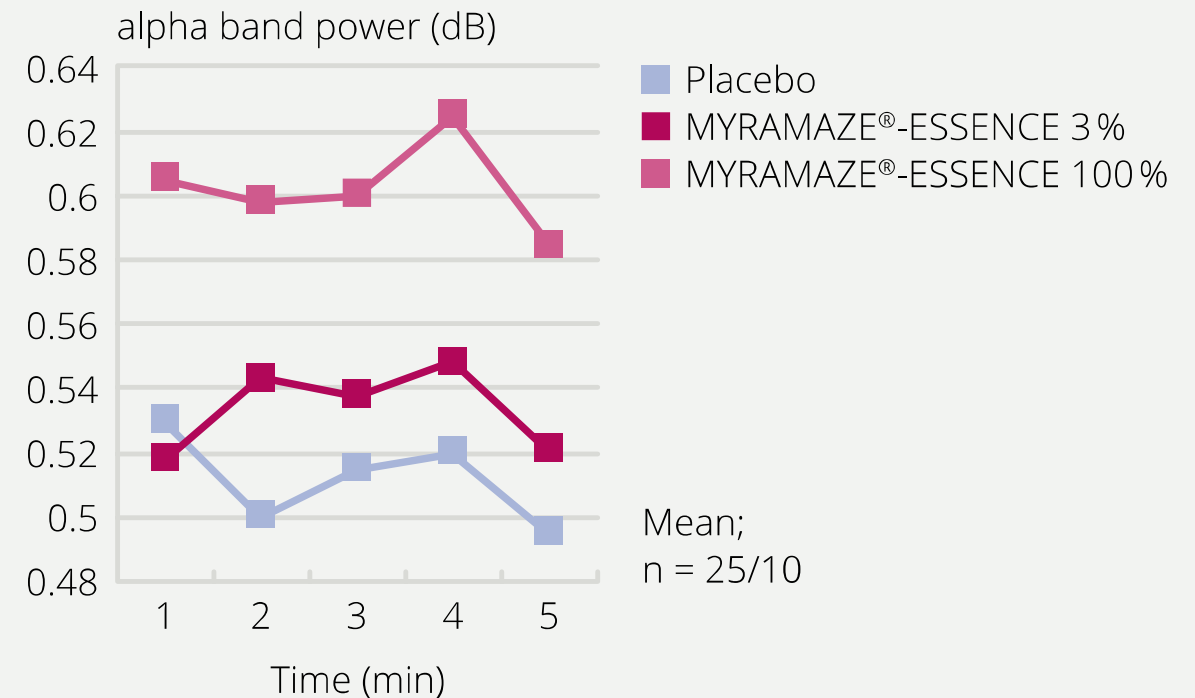

Presentation of negatively associated images from the OASIS image database for 2.5 minutes. Then application of the cosmetic formulation to the face or subject smells the active ingredient. EEG recording for 5 minutes.

RESULTS

Concentration-dependent increase in alpha wave intensity after presentation with the active ingredient.

Can help with relaxation

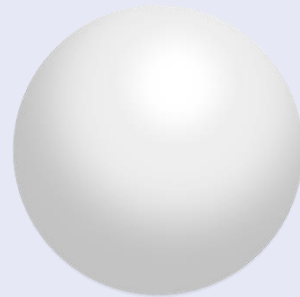

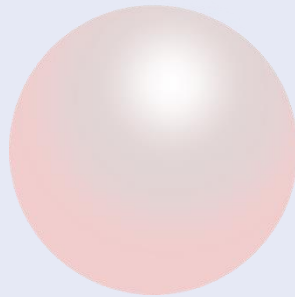

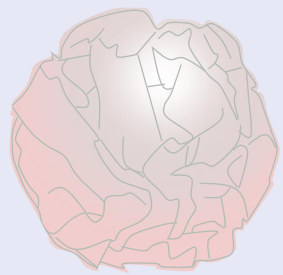

α -waves fraction after product application

Five steps to glowing skin with MYRAMAZE®-ESSENCE

(*in-vivo* study)

THE PATH FROM DRY, SALLOW SKIN TO SKIN WITH A ONE-OF-A-KIND RADIANCE

Dry, sallow and
reddened skin

Improved
moisture

Reduced
redness

Lightening

Reduced
roughness

Improved shine

BASICS

Lost radiance comes from dry skin. Dry corneocytes make the skin look rough, pale, dull, and uneven. Proper skin hydration gives the skin a natural glow. Redness makes the skin look irregular and inflamed. The reduction in redness contributes to a flawless appearance. A lighter complexion allows the light to reflect better and develops a higher luminosity. Reduction of the roughness and improved gloss round out the finish.

MYRAMAZE®-ESSENCE revives dry skin

(*in-vivo* study)

METHODOLOGY

Measurement of skin hydration using corneometry.

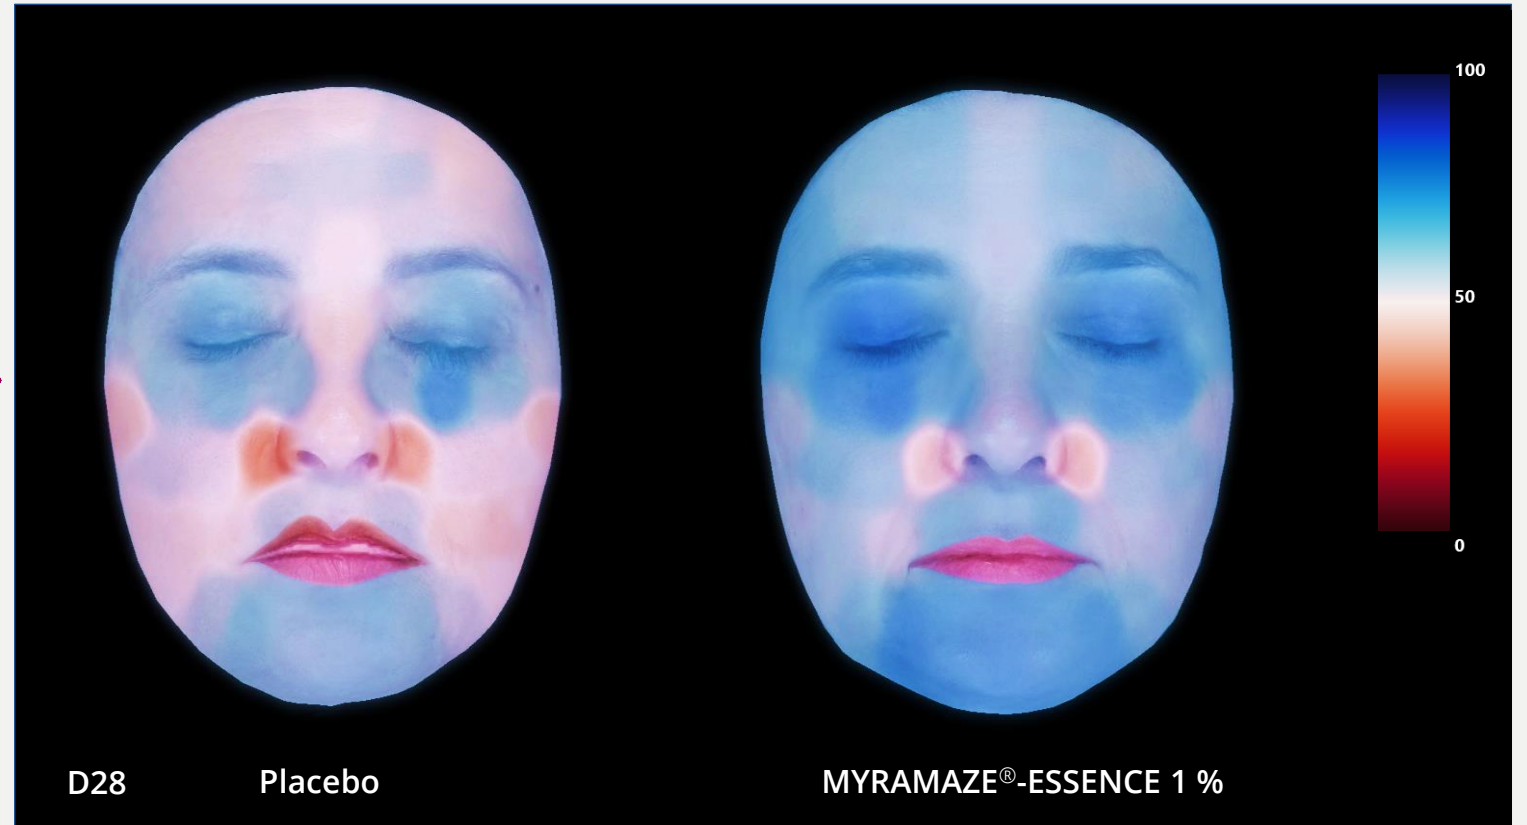

PROCEDURE

Application of the cosmetic formulation to the face twice a day. Measurements before, after 30 minutes, 7 and 28 days in 53 areas of the face.

RESULTS

Increase in skin moisture.

Intensive skin hydration

MYRAMAZE®-ESSENCE revives dry skin

(*in-vivo* study)

METHODOLOGY

Measurement of skin hydration using corneometry.

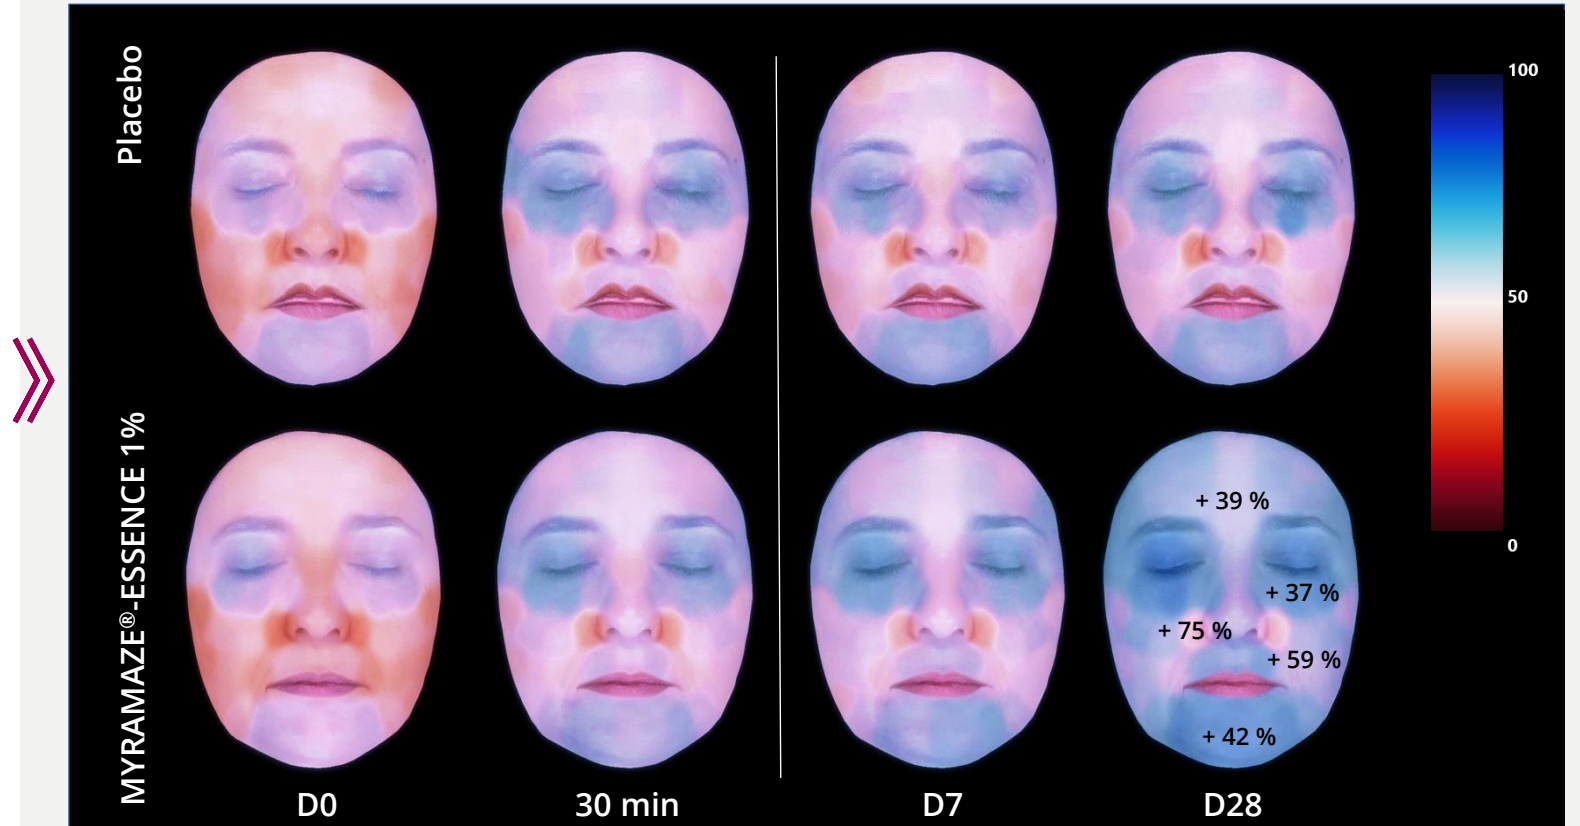

PROCEDURE

Application of the cosmetic formulation to the face twice a day. Measurements before, after 30 minutes, 7 and 28 days in 53 areas of the face.

RESULTS

Intensive moisturising of the skin and instant strengthening of the skin barrier (see brochure for details).

Evenly moisturised skin

MYRAMAZE®-ESSENCE reduces the reddening of the skin

(*in-vivo* study)

METHODOLOGY

Measurement of skin colour using colorimetry.

PROCEDURE

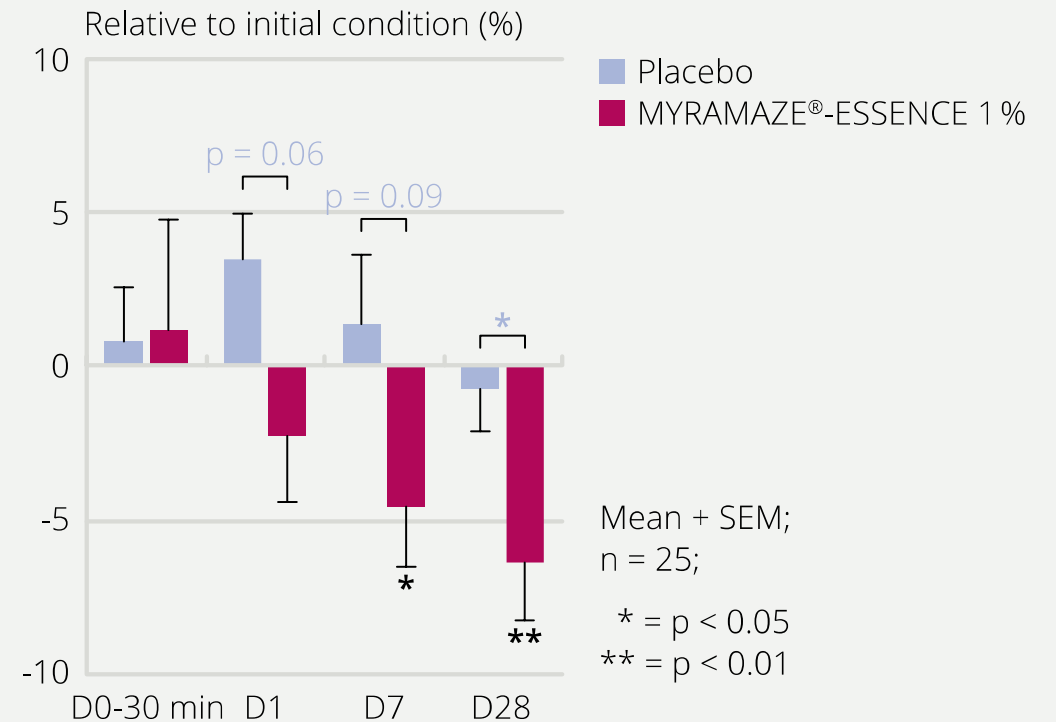

Application of the cosmetic formulation to the face twice a day. Measurement before, 30 minutes and 24 hours after application and after 7 and 28 days.

RESULTS

Significant decrease in the proportion of red in the skin colour.

Reduces redness

Reduction of a value

MYRAMAZE®-ESSENCE brightens the skin - immediate and long-lasting (*in-vivo* study)

METHODOLOGY

Measurement of skin colour using colorimetry.

PROCEDURE

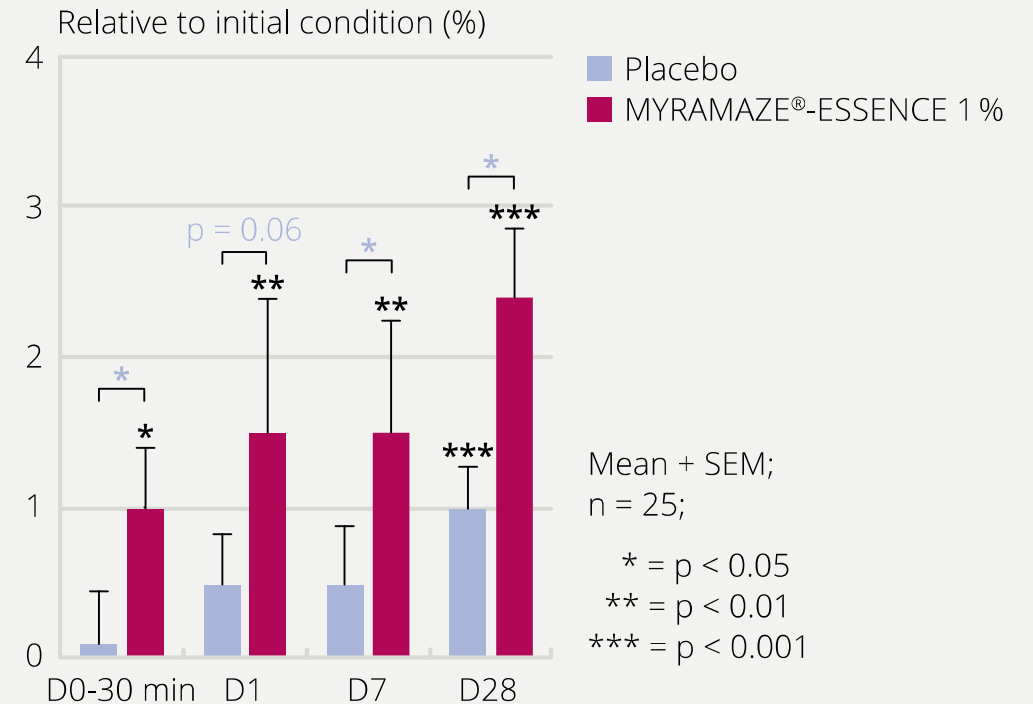

Application of the cosmetic formulation to the face twice a day.
Measurement before, 30 minutes and 24 hours after application
and after 7 and 28 days.

RESULTS

Immediate significant increase in the proportion of white in the
skin colour.

Brightens the skin

Improvement in L-value

MYRAMAZE®-ESSENCE smooths the skin

(*in-vivo* study)

METHODOLOGY

Measurement of roughness by means of fringe projection (PRIMOS) and dermatological assessment.

PROCEDURE

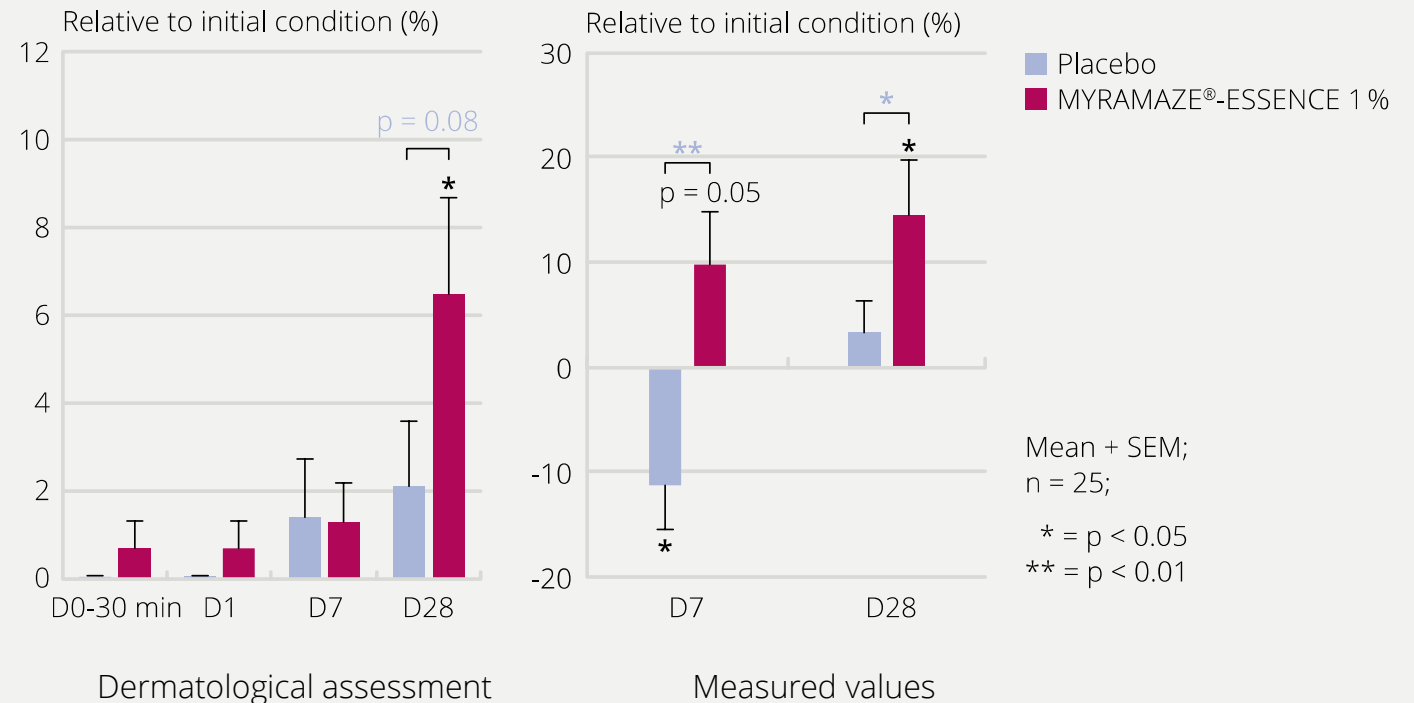

Application of the cosmetic formulation to the face twice a day. Assessment and measurement before, 30 minutes and 24 hours after application and after 7 and 28 days.

RESULTS

Significant improvement in roughness after just 7 days compared to placebo. Confirmation by dermatological assessment.

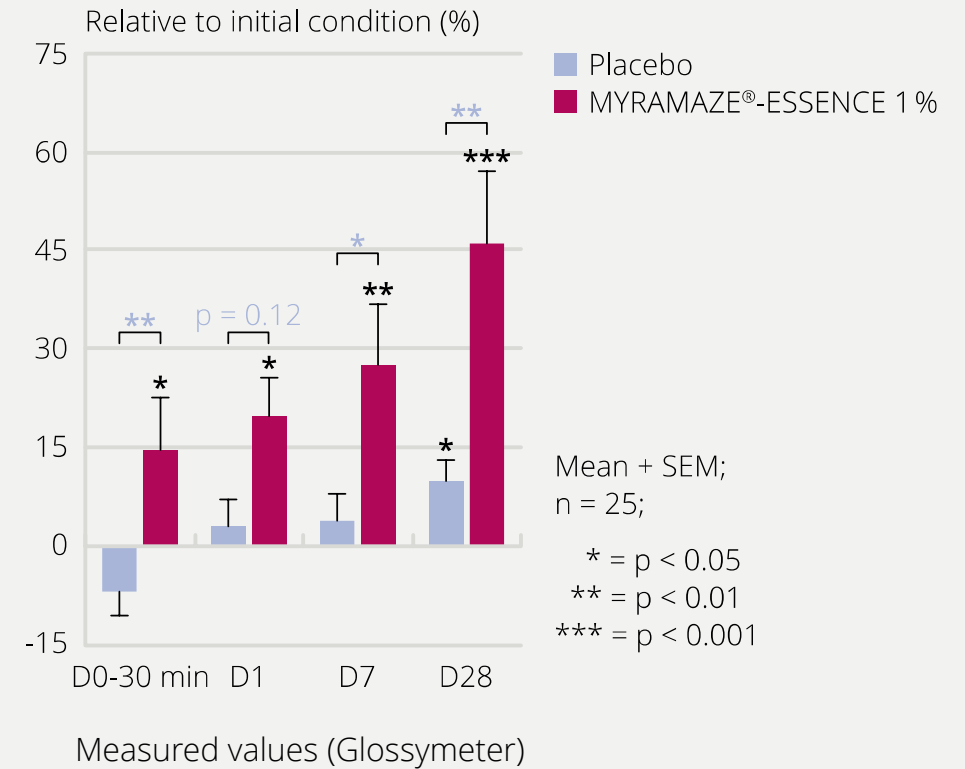

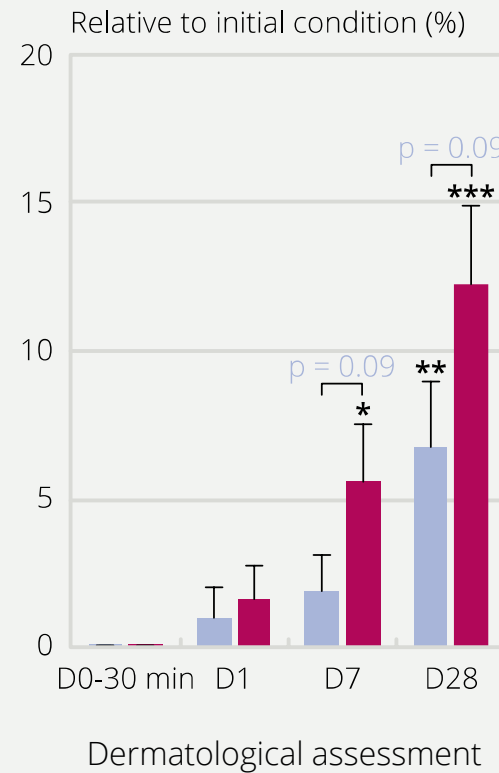

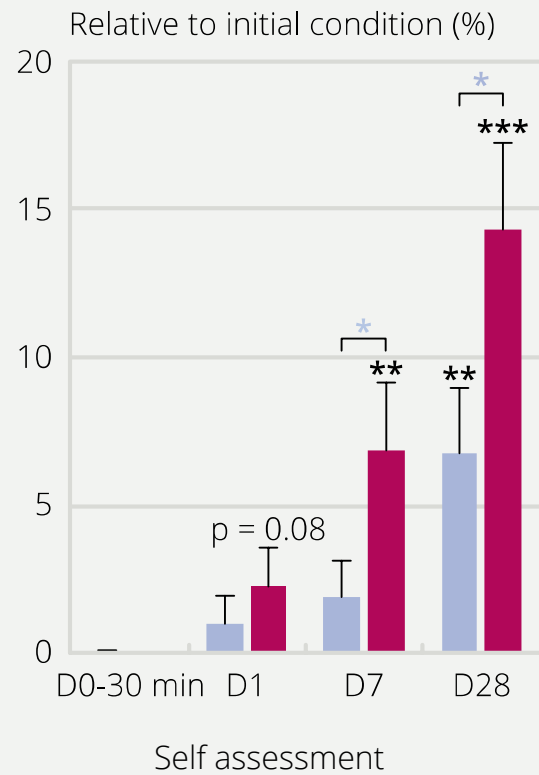

Gives a smooth skin surface

Improvement in skin roughness

MYRAMAZE®-ESSENCE improves the complexion and the shine of the skin (*in-vivo* study)

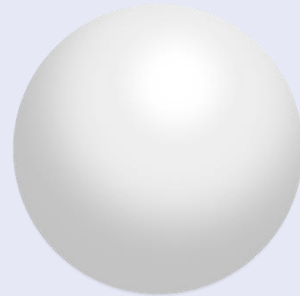

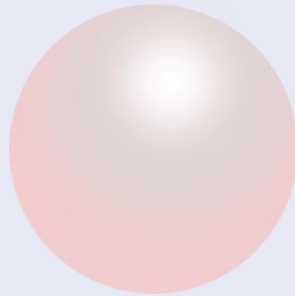

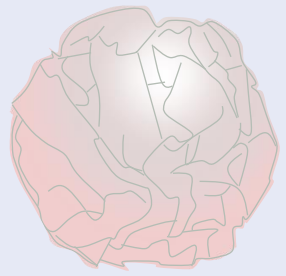

Improvement in skin expression (complexion / gloss)

MYRAMAZE®-ESSENCE makes the skin shine

(*in-vivo* study)

THE PATH FROM DRY, SALLOW SKIN TO SKIN WITH A ONE-OF-A-KIND RADIANCE

Dry, sallow and
reddened skin

Improved
moisture

Reduced
redness

Lightening

Reduced
roughness

Improved shine

Five-fold effect for
improved radiance

MYRAMAZE®-ESSENCE plumps the lips

(*in-vivo* study)

METHODOLOGY

Measurement of the plumping effect using high-resolution 3D photography (VECTRA).

PROCEDURE

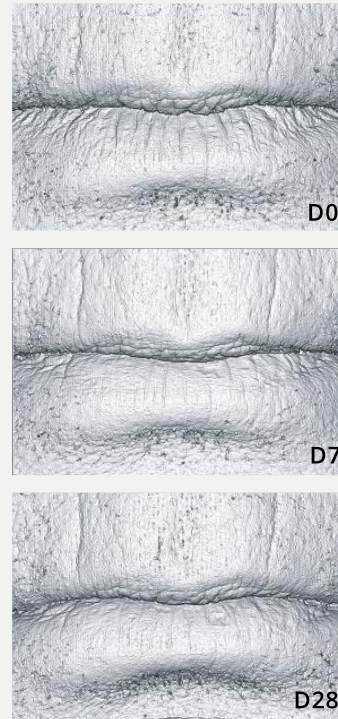

Application of the cosmetic formulation to the lips twice a day. Measurement before and after 7 and 28 days.

RESULTS

Significant replenishment effect after just 7 days compared to placebo and baseline. Significant decrease in wrinkles ($p < 0.05$, see brochure for details)

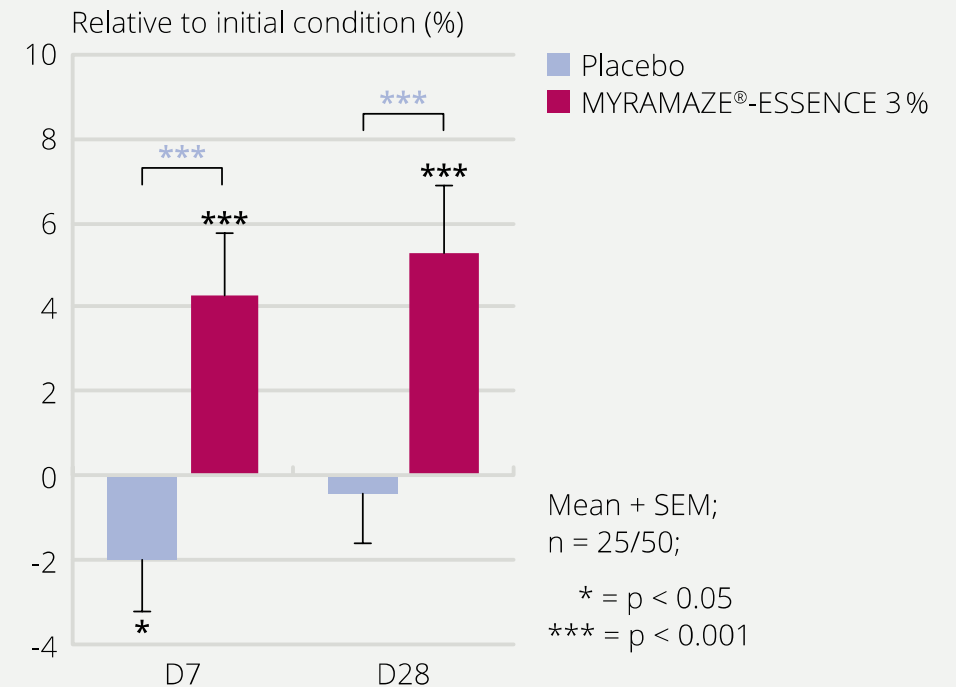

Plumps the lips and reduces wrinkles on the lips

Lip plumping effect

#1; age 65 years

Quantification of lip plumping effect

MYRAMAZE®-ESSENCE makes wrinkles disappear

(*in-vivo* study)

METHODOLOGY

Measurement of wrinkles by means of fringe projection (PRIMOS) and dermatological assessment.

PROCEDURE

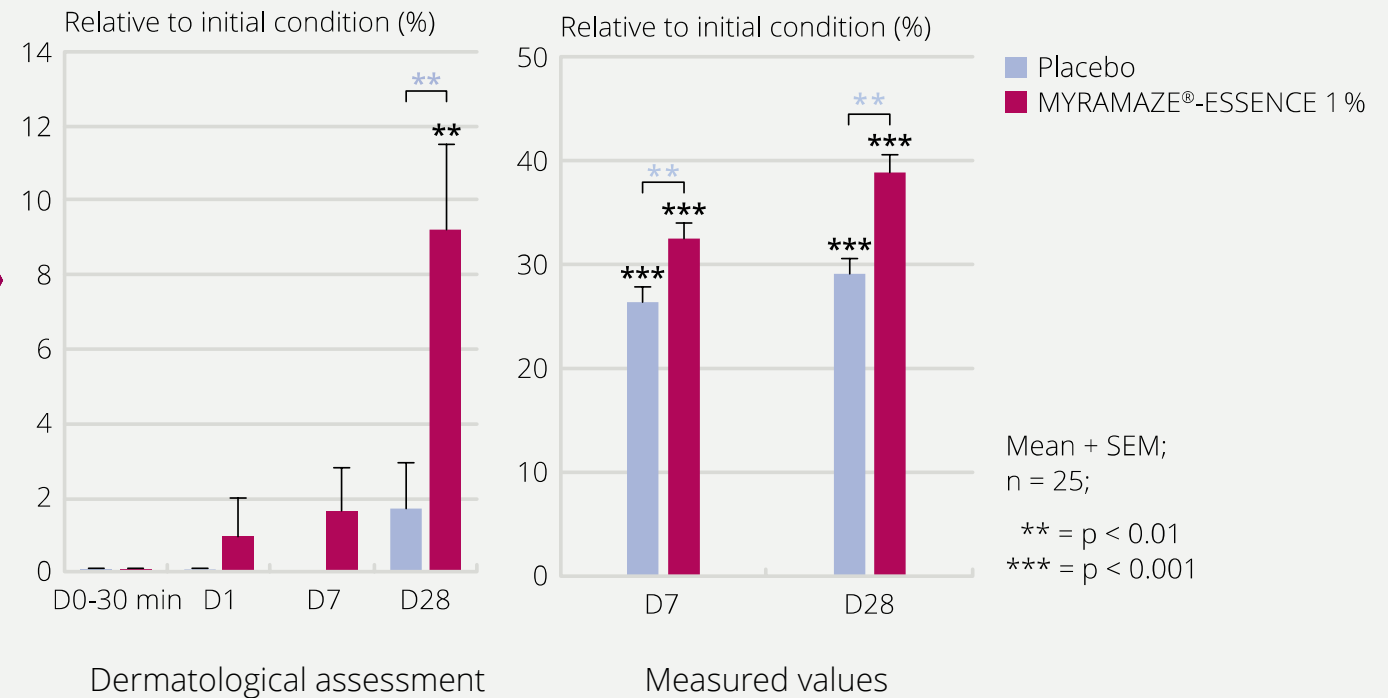

Application of the cosmetic formulation to the face twice a day. Assessment and measurement before, 30 minutes and 24 hours after application and after 7 and 28 days.

RESULTS

Significant improvement in wrinkles after just 7 days compared to baseline and placebo. Confirmation by dermatological assessment.

Reduces the number of wrinkles

Improvement in periorcular wrinkle appearance

MYRAMAZE®-ESSENCE makes the skin flexible

(*in-vivo* study)

METHODOLOGY

Measurement of elasticity by means of cutometry and dermatological assessment.

PROCEDURE

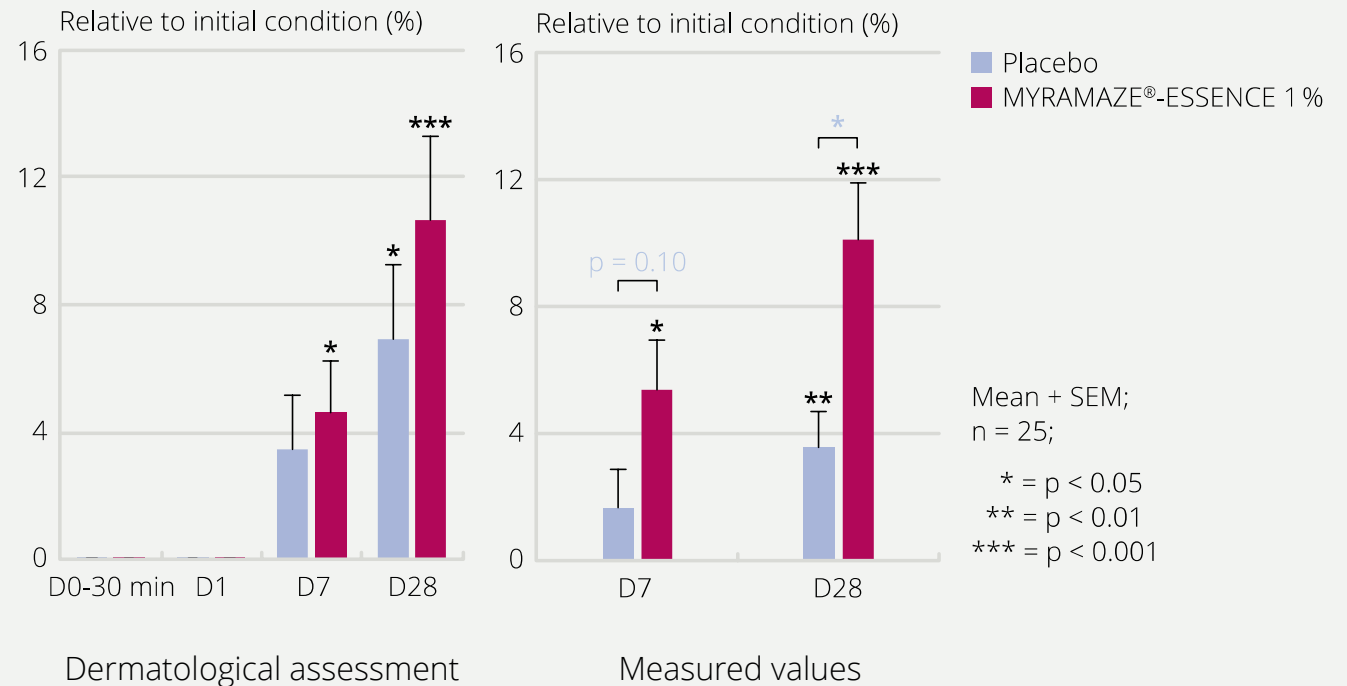

Application of the cosmetic formulation to the face twice a day. Assessment and measurement before, 30 minutes and 24 hours after application and after 7 and 28 days.

RESULTS

Significant increase in elasticity after just 7 days, significantly higher than placebo after 4 weeks. Confirmation by dermatological assessment.

Improves the elasticity of the skin

Improvement in skin elasticity

MYRAMAZE®-ESSENCE relaxes fibroblasts

(*in-vitro* study)

METHODOLOGY

Measurement of the collagen gel contraction using automated microscopic area measurement.

PROCEDURE

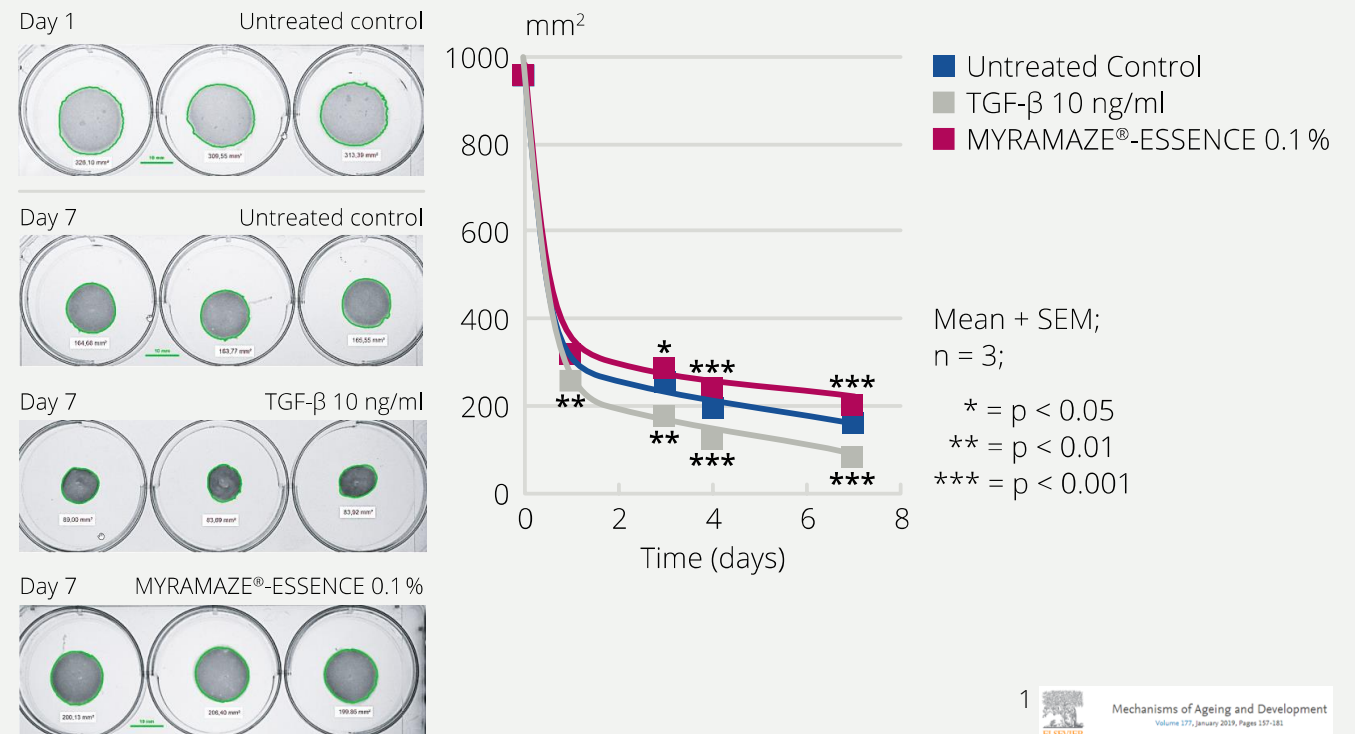

Polymerization of a collagen gel in the presence of fibroblasts for two hours. Then the active is incubated for one week (positive control TGF- β).

RESULTS

Significant relaxation of the collagen gel by 23% in contrast to the untreated control, as is the case with young fibroblasts¹.

Relaxes collagen from tensile stress

Collagen gel contraction by fibroblasts – Area of collagen gel

MYRAMAZE®-ESSENCE activates keratinocytes

via the bitter taste receptor (*in-vitro* study)

METHODOLOGY

Quantification of calcium influx and cAMP formation using time-resolved fluorescence microscopy (HTRF, see brochure for details).

PROCEDURE

Calcium influx: Addition of the test substances 5 seconds after the start of the recording. Quantification after 2 minutes

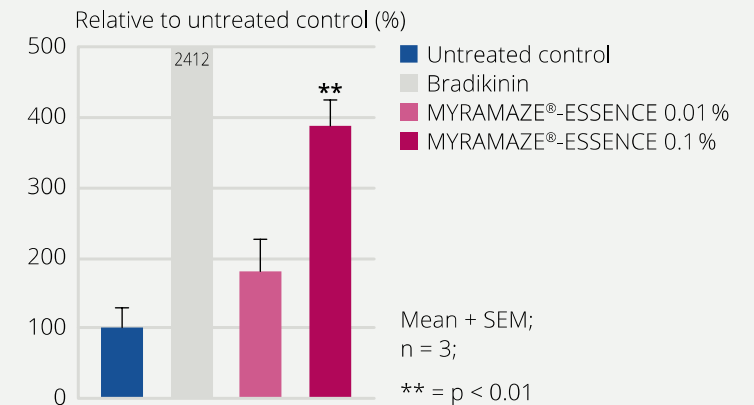

cAMP release: The cells were treated with the test substances 30 minutes before the measurement (positive control forskolin).

RESULTS

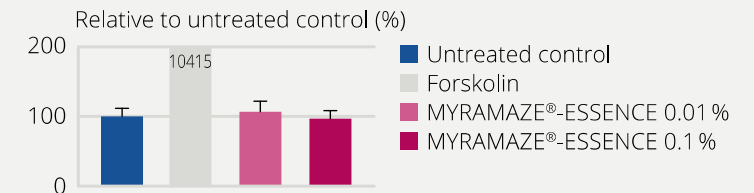

MYRAMAZE®-ESSENCE induces a significant and concentration-dependent calcium influx without increasing the cAMP level.

Activates the bitter taste receptors of the cells

Calcium mobilization in NHEK

cAMP release in NHEK

MYRAMAZE®-ESSENCE activates keratinocytes via the bitter taste receptor (*in-vitro* study)

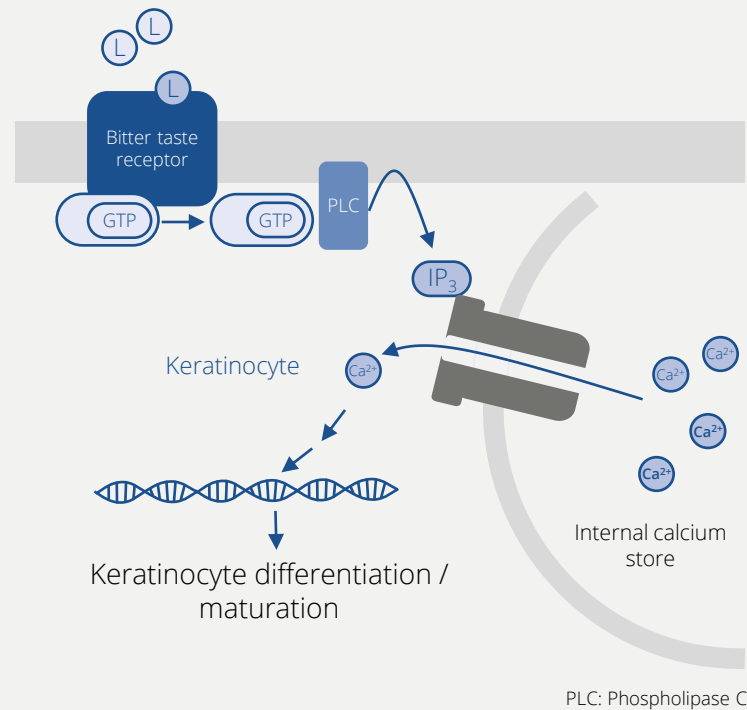

RESULTS

MYRAMAZE®-ESSENCE induces a significant and concentration-dependent calcium influx without increasing the cAMP level. This indicates an activation of the bitter substance receptors and not the olfactory receptors, which would cause an increase in cAMP.

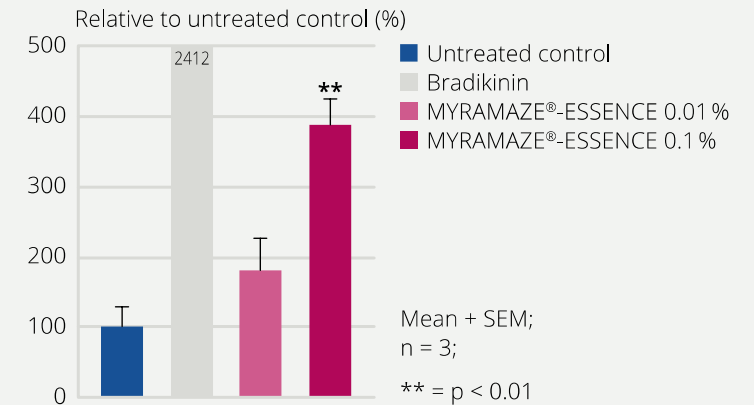

Activates the skin's
bitter taste receptors

BITTER TASTE RECEPTORS IN SKIN

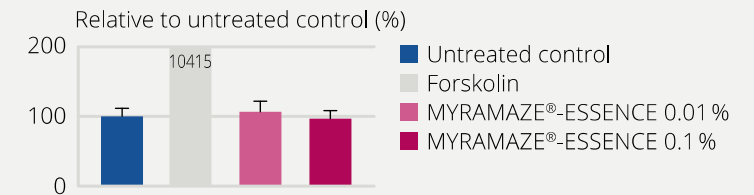

G-protein coupled receptor, **not** cAMP-dependent

Calcium mobilization in NHEK

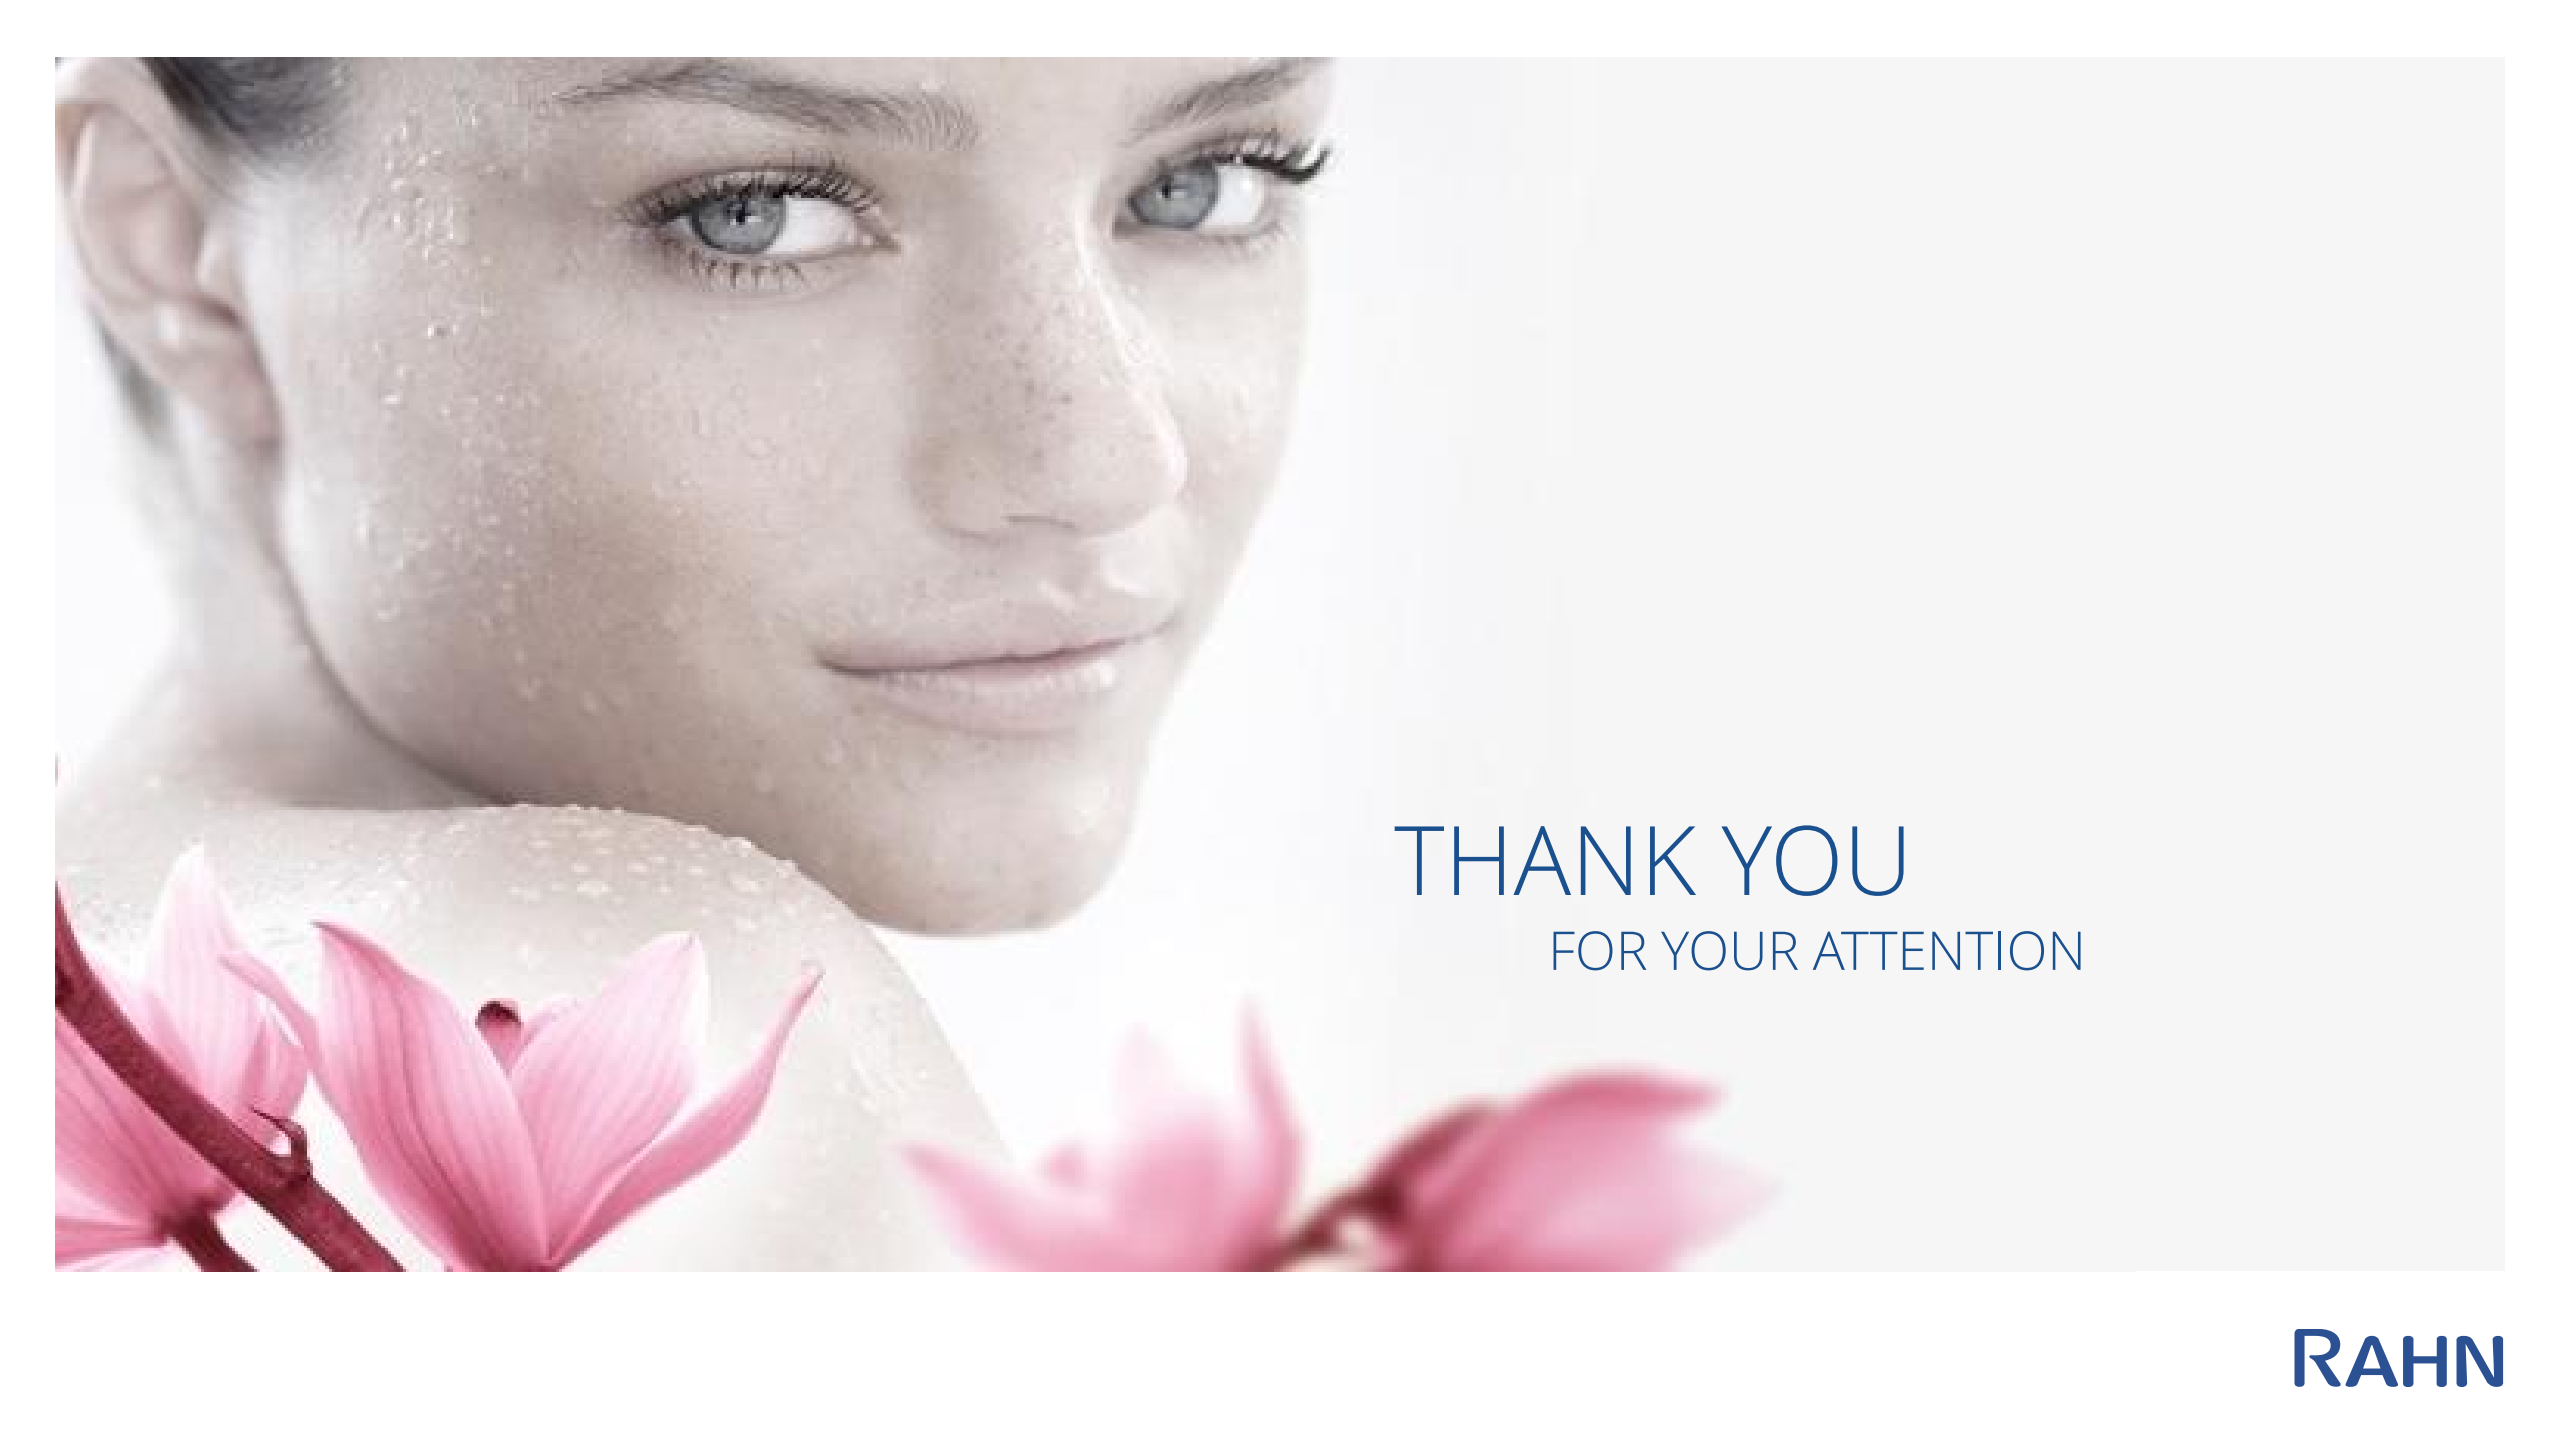

cAMP release in NHEK
